Resuscitation, 17 (1989) 301–303
Elsevier Scientific Publishers Ireland Ltd.

SUBJECT INDEX
Volume 17 (1989)

Acidosis, carbon dioxide, resuscitation, 55
Adult respiratory distress syndrome, anesthesia, bronchoalveolar lavage, edema, hyaluronic acid, 223
Adult respiratory distress syndrome, low molecular weight dextran, indium-111-oxine platelets, *Escherichia coli* endotoxic shock, 1
Algorithm use, pre-hospital ventricular fibrillation, 131
Anesthesia, adult respiratory distress syndrome, bronchoalveolar lavage, edema, hyaluronic acid, 223
Arrest rhythm, prehospital cardiopulmonary resuscitation, witnessed arrest, response time, save rate, 251
Arterial lactate, cardiopulmonary bypass, oxygen consumption, 153
Asphyxia, cardiac arrest, cerebral ischemia, corticosteroids, enzymes, rat model, 39
Atropine, electromechanical dissociation, bicarbonate, epinephrine, isoproterenol, prehospital cardiac arrest, pericardiocentesis, fluid challenge, MAST suit, needle thoracostomy, 163

Barbiturate therapy, cerebral aneurysm, computer tomography, head injury, opportunistic infection, 233
Bicarbonate, electromechanical dissociation, epinephrine, atropine, isoproterenol, prehospital cardiac arrest, pericardiocentesis, fluid challenge, MAST suit, needle thoracostomy, 163
Brain damage, cardiac arrest, epinephrine, dopamine, hyperglycemia, neurologic function, 273
Bronchoalveolar lavage, adult respiratory distress syndrome, anesthesia, edema, hyaluronic acid, 223
Bystander CPR, neurologic outcome, prehospital cardiac arrest, 91

Carbon dioxide, acidosis, resuscitation, 55
Cardiac arrest, asphyxia, cerebral ischemia, corticosteroids, enzymes, rat model, 39
Cardiac arrest, cerebral blood flow, cardiopulmonary resuscitation, cerebral ischemia, hydrogen clearance CBF method, resuscitation, 105
Cardiac arrest, epinephrine, dopamine, hyperglycemia, neurologic function, brain damage, 273
Cardiac energy metabolism, hypovolemic shock, naloxone, 33
Cardiopulmonary bypass, arterial lactate, oxygen consumption, 153
Cardiopulmonary resuscitation, cerebral blood flow, cardiac arrest, cerebral ischemia, hydrogen clearance CBF method, resuscitation, 105
Cardiopulmonary resuscitation, UK14,304-18, imidazoline, 243
Cerebral aneurysm, barbiturate therapy, computer tomography, head injury, opportunistic infection, 233
Cerebral blood flow, cardiac arrest, cardiopulmonary resuscitation, cerebral ischemia, hydrogen clearance CBF method, resuscitation, 105
Cerebral ischemia, asphyxia, cardiac arrest, corticosteroids, enzymes, rat model, 39
Cerebral ischemia, cerebral blood flow, cardiac arrest, cardiopulmonary resuscitation, hydrogen clearance CBF method, resuscitation, 105
Chelation, haemorrhagic shock, free radicals, tissue damage, decompartmenized iron, survival, 63
Colloid, shock, hemorrhage, trauma, crystalloid, vascular permeability, lung water, 77
Computer tomography, barbiturate therapy, cerebral aneurysm, head injury, opportunistic infection, 233
Continuous hemorrhage, hemorrhagic shock, shock model, swine, 287
Corticosteroids, asphyxia, cardiac arrest, cerebral ischemia, enzymes, rat model, 39
CPR, school health, health education, effectiveness, 211
Critical care, pediatrics, intensive care, severity of illness, health care resources, 143
Crystalloid, shock, hemorrhage, trauma, colloid, vascular permeability, lung water, 77

Decompartmenized iron, haemorrhagic shock, free radicals, tissue damage, chelation, survival, 63
Dopamine, cardiac arrest, epinephrine, hyperglycemia, neurologic function, brain damage, 273
Drug administration, endobronchial, endotracheal, emergency, resuscitation, 261

Edema, adult respiratory distress syndrome, anesthesia, bronchoalveolar lavage, hyaluronic acid, 223
Effectiveness, CPR, school health, health education, 211
Electrocardiography, electromechanical dissociation, prehospital cardiac arrest, 183
Electromechanical dissociation, bicarbonate, epinephrine, atropine, isoproterenol, prehospital cardiac arrest, pericardiocentesis, fluid challenge, MAST suit, needle thoracostomy, 163
Electromechanical dissociation, electrocardiography, prehospital cardiac arrest, 183
Electromechanical dissociation, prehospital cardiac arrest, 173
Electromechanical dissociation, prehospital cardiac arrest, morphology, 195
Emergency, endobronchial, endotracheal, drug administration, resuscitation, 261
Endobronchial, endotracheal, emergency, drug administration, resuscitation, 261
Endotracheal, endobronchial, emergency, drug administration, resuscitation, 261
Enzymes, asphyxia, cardiac arrest, cerebral ischemia, corticosteroids, rat model, 39
Epinephrine, cardiac arrest, dopamine, hyperglycemia, neurologic function, brain damage, 273
Epinephrine, electromechanical dissociation, bicarbonate, atropine, isoproterenol, prehospital cardiac arrest, pericardiocentesis, fluid challenge, MAST suit, needle thoracostomy, 163
Escherichia coli endotoxic shock, low molecular weight dextran, indium-111-oxine platelets, adult respiratory distress syndrome, 1

Fluid challenge, electromechanical dissociation, bicarbonate epinephrine, atropine, isoproterenol, prehospital cardiac arrest, pericardiocentesis, MAST suit, needle thoracostomy, 163
Free radicals, haemorrhagic shock, tissue damage, decompartmenized iron, chelation, survival, 63

Haemorrhagic shock, free radicals, tissue damage, decompartmenized iron, chelation, survival, 63
Head injury, barbiturate therapy, cerebral aneurysm, computer tomography, opportunistic infection, 233
Health care resources, pediatrics, intensive care, critical care, severity of illness, 143
Health education, CPR, school health, effectiveness, 211
Hemorrhage, shock, monkeys, resuscitation, hypovolemia, 11
Hemorrhage, shock, trauma, colloid, crystalloid, vascular permeability, lung water, 77
Hemorrhagic shock, continuous hemorrhage, shock model, swine, 287
Hemorrhagic shock, transcutaneous oxygen tension, pneumatic antishock garment, Trendelenburg position, 119
Hyaluronic acid, adult respiratory distress syndrome, anesthesia, bronchoalveolar lavage, edema, 223
Hydrogen clearance CBF method, cerebral blood flow, cardiac arrest, cardiopulmonary resuscitation, cerebral ischemia, resuscitation, 105
Hyperglycemia, cardiac arrest, epinephrine, dopamine, neurologic function, brain damage, 273
Hypovolemia, shock, hemorrhage, monkeys, resuscitation, 11
Hypovolemic shock, cardiac energy metabolism, naloxone, 33

Imidazoline, cardiopulmonary resuscitation, UK14,304-18, 243
Indium-111-oxine platelets, low molecular weight dextran, *Escherichia coli* endotoxic shock, adult respiratory distress syndrome, 1
Intensive care, pediatrics, critical care, severity of illness, health care resources, 143
Isoproterenol, electromechanical dissociation, bicarbonate, epinephrine, atropine, prehospital cardiac arrest, pericardiocentesis, fluid challenge, MAST suit, needle thoracostomy, 163

Low molecular weight dextran, indium-111-oxine platelets, *Escherichia coli* endotoxic shock, adult respiratory distress syndrome, 1
Lung water, shock, hemorrhage, trauma, colloid, crystalloid, vascular permeability, 77

MAST suit, electromechanical dissociation, bicarbonate, epinephrine, atropine isoproterenol, prehospital cardiac arrest, pericardiocentesis, fluid challenge, needle thoracostomy, 163
Monkeys, shock, hemorrhage, resuscitation, hypovolemia, 11
Morphology, electromechanical dissociation, prehospital cardiac arrest, 195

Naloxone, hypovolemic shock, cardiac energy metabolism, 33
Needle thoracostomy, electromechanical dissociation, bicarbonate, epinephrine, atropine, isoproterenol, prehospital cardiac arrest, pericardiocentesis, fluid challenge, MAST suit, 163
Neurologic function, cardiac arrest, epinephrine, dopamine, hyperglycemia, brain damage, 273
Neurologic outcome, bystander CPR, prehospital cardiac arrest, 91

Opportunistic infection, barbiturate therapy, cerebral aneurysm, computer tomography, head injury, 233
Oxygen consumption, cardiopulmonary bypass, arterial lactate, 153

Pediatrics, intensive care, critical care, severity of illness, health care resources, 143
Pericardiocentesis, electromechanical dissociation, bicarbonate, epinephrine, atropine, isoproterenol, prehospital cardiac arrest, fluid challenge, MAST suit, needle thoracostomy, 163
Pneumatic antishock garment, transcutaneous oxygen tension, Trendelenburg position, hemorrhagic shock, 119
Pre-hospital ventricular fibrillation, algorithm use, 131
Prehospital cardiac arrest, electromechanical dissociation, bicarbonate, epinephrine, atropine, isoproterenol, pericardiocentesis, fluid challenge, MAST suit, needle thoracostomy, 163
Prehospital cardiac arrest, electromechanical dissociation, 173
Prehospital cardiac arrest, electromechanical dissociation, electrocardiography, 183
Prehospital cardiac arrest, electromechanical dissociation, morphology, 195
Prehospital cardiac arrest, neurologic outcome, bystander CPR, 91
Prehospital cardiopulmonary resuscitation, witnessed arrest, arrest rhythm, response time, save rate, 251

Rat model, asphyxia, cardiac arrest, cerebral ischemia, corticosteroids, enzymes, 39
Response time, prehospital cardiopulmonary resuscitation, witnessed arrest, arrest rhythm, save rate, 251
Resuscitation, acidosis, carbon dioxide, 55
Resuscitation, cerebral blood flow, cardiac arrest, cardiopulmonary resuscitation, cerebral ischemia, hydrogen clearance CBF method, 105
Resuscitation, endobronchial, endotracheal, emergency, drug administration, 261
Resuscitation, shock, hemorrhage, monkeys, hypovolemia, 11

Save rate, prehospital cardiopulmonary resuscitation, witnessed arrest, arrest rhythm, response time, 251
School health, CPR, health education, effectiveness, 211
Severity of illness, pediatrics, intensive care, critical care, health care resources, 143
Shock, hemorrhage, monkeys, resuscitation, hypovolemia, 11
Shock, hemorrhage, trauma, colloid, crystalloid, vascular permeability, lung water, 77
Shock model, hemorrhagic shock, continuous hemorrhage, swine, 287
Survival, haemorrhagic shock, free radicals, tissue damage, decompartmenized iron, chelation, 63
Swine, hemorrhagic shock, continuous hemorrhage, shock model, 287

Tissue damage, haemorrhagic shock, free radicals, decompartmenized iron, chelation, survival, 63
Transcutaneous oxygen tension, pneumatic antishock garment, Trendelenburg position, hemorrhagic shock, 119
Trauma, shock, hemorrhage, colloid, crystalloid, vascular permeability, lung water, 77
Trendelenburg position, transcutaneous oxygen tension, pneumatic antishock garment, hemorrhagic shock, 119

UK14,304-18, cardiopulmonary resuscitation, imidazoline, 243

Vascular permeability, shock, hemorrhage, trauma, colloid, crystalloid, lung water, 77

Witnessed arrest, prehospital cardiopulmonary resuscitation, arrest rhythm, response time, save rate, 251

Resuscitation, 17 (1989) 305
